Key partners

“The CLR is an opportunity for institutions to evolve a 19th-century artifact - the transcript- to meet the needs of the 21st-century learner and workforce - and at the same time, reinforce the value proposition of higher education to the learner and the employment sector.

It is a tool that an institution can deploy to more firmly signal its return on investment to the general public.”

Melanie Gottlieb
Executive Director of AACRAO

“The comprehensive learner record (CLR) is the bridge that connects K-12, higher education, life-long learning, and employment.

Through the CLR, learners have the power to collect and share their skills and achievements in a way that can be trusted and verified across industries, institutions, and countries.

By using the CLR standard, it gives the learner more control over their achievements, instead of being trapped in a proprietary system, empowering them with more control over their future success.”

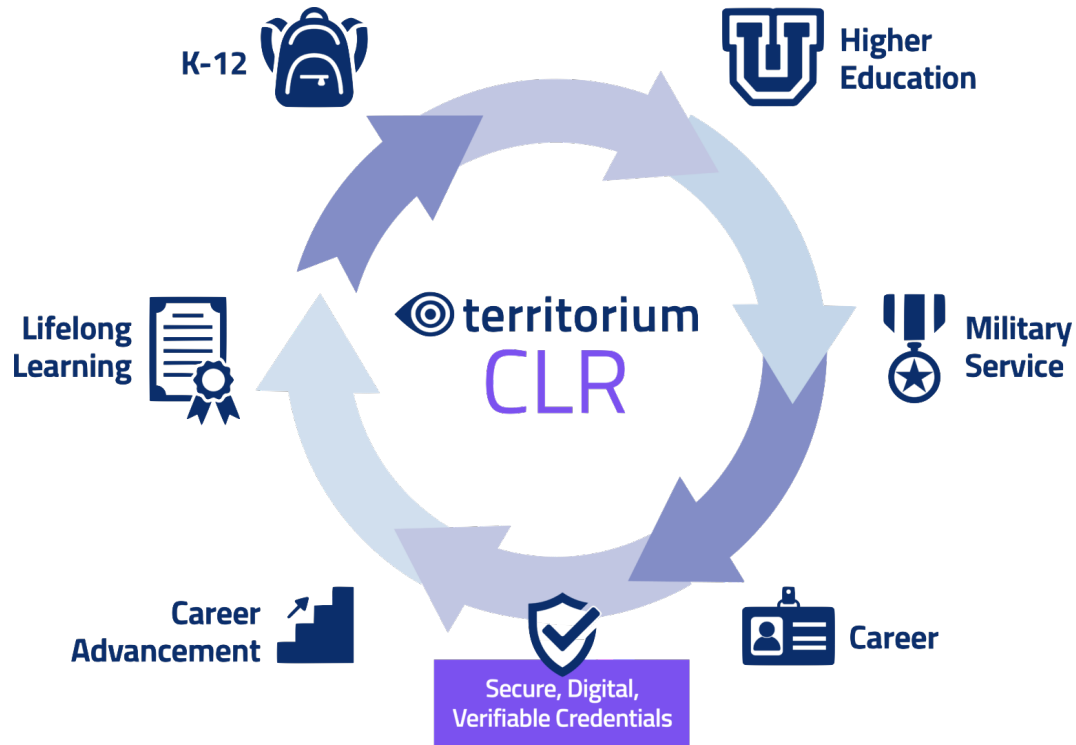

Kelly Hoyland
Director of Higher Education Programs
1EdTech

1EDTECH

What is a CLR?

A Comprehensive Learner Record (CLR) shows a complete picture of lifelong learning, from the earliest stages of learning to advanced education to career achievements. [1EdTech]

A decorative graphic on the left side of the slide consists of a red hexagonal shape with internal lines, followed by a series of horizontal purple bars of varying lengths, and a cluster of green circles and lines at the bottom.

A **Comprehensive Learner Record (CLR)** shows a complete picture of lifelong learning, from the earliest stages of learning to advanced education to career achievements, whether achieved within or beyond the classroom or factory floor.

COMPREHENSIVE
LEARNER RECORD

Interoperable engine connecting learning outcomes to learning experiences and workforce skills

- Standards
- Badges
- Credentials
- Projects
- Performances
- Courses
- Grades
- Assessments
- Skills & Abilities
- Service Learning
- Experiential Learning
- Apprenticeships
- Internships
- Volunteer Service

AND the evidence.

“Through Territorium’s CLR, we are able to gather the evidence we need for validating student competencies and skills and empower our students to articulate their capabilities far greater than what a transcript can do.”

Dr. Solomon Alao
Assistant Vice President
Outcome Assessment
Morgan State University

Why it matters?

The role of education is to maintain and expand the right of self-determination.

An asset-based system embodies a strengths-based perspective.

Challenging the model of delayed gratification builds institutional responsiveness and learner loyalty.

Yesterday's "non-traditional" learner has become today's predominant student.

We bring our whole selves with us everywhere we go.

Recognizing and utilizing all the skills and abilities we possess makes us most impactful.

Signature Features

- Design, issue, and import digital badges via a single interoperable system
- Connect learning outcomes, workforce skills, and learning experiences occurring within and beyond the classroom or campus
- Create an immutable and portable learner record of achievements
- Curate employment opportunities within the AI-powered learner mobile app
- Conduct prior learning and evaluate external experience

ASSESSMENT SERVICES

Assessment Services may include HEIghten, E-Proficiency Profile, and other assessments of the institution.
